# 用户相关

用户:登录系统的一个账号,是购买车票的主体。乘客:真实存在的一个个体,是乘坐火车的主体。

## 用户信息表 users

字段名称	字段类型	是否主键	是否外键	是否为空	字段含义	备注
id	int	是			用户编 码	
name	varchar(10)				用户昵 称	
type	tinyint				用户类 型	0-用户, 1-管理员
telephone	varchar(11)				联系方 式	
password	varchar(20)				用户密 码	
state	tinyint				用户状 态	0-正常, 1-冻结, 2- 注销
create_time	date				创建时间	yyyy-mm-dd

## 乘客信息表 passengers

字段名称	字段类型	是否 主键	是否 外键	是否 为空	字段 含义	备注
id	int	是			乘客 编码	
name	varchar(20)				乘客 姓名	
telephone	varchar(11)				联系 方式	
ID_type	tinyint				证件 类型	0-中华人民共和国居民 身份证 1-港澳居民来往内地通 行证 2-台湾居民来往大陆通 行证
ID_no	varchar(30)				证件 号码	
type	tinyint				乘客 类型	0-成人, 1-学生, 2-儿童, 3-残疾军人

# 车站相关

## 省份编码表 provinces

字段名称	字段类型	是否主键	是否外键	是否为空	字段含义	备注
id	int	是			省份编码	
name	varchar(10)				省份名称	

```
CREATE TABLE provinces(
    id` INT UNSIGNED AUTO_INCREMENT,
    iname` VARCHAR(10) NOT NULL,
    PRIMARY KEY ( id`)
) ENGINE=InnoDB DEFAULT CHARSET=utf8;
```

## 城市编码表 cities

字段名称	字段类型	是否主 键	是否外键	是否为 空	字段含义	备注
id	int	是			城市编码	
province_id	int		<u>省份编码</u> 表		所在省份编 码	
name	varchar(20)				城市名称	

```
CREATE VIEW view_cities

AS (

SELECT ct.id AS id,

pv.name AS province,

ct.name AS city

FROM provinces pv,

cities ct

WHERE pv.id = ct.province_id

ORDER BY province

);
```

## 火车站编码表 stations

字段名称	字段类型	是否主键	是否外键	是否为 空	字段含义	备注
id	int	是			火车站编码	
city_id	int		<u>城市编码</u> 麦		所在城市编 码	
station_name	varchar(20)				火车站名称	

```
CREATE TABLE stations(
    id INT UNSIGNED AUTO_INCREMENT,
    icity_id INT UNSIGNED NOT NULL,
    iname VARCHAR(20) NOT NULL,
    PRIMARY KEY ( id ),
    FOREIGN KEY ( city_id ) REFERENCES cities( id )

ENGINE=Innodb Default Charset=utf8;
```

```
CREATE VIEW view_stations

AS(

SELECT st.id AS id,

pv.name AS povince,

ct.name AS city,

st.name AS station

FROM provinces pv,

cities ct,

stations st

WHERE pv.id = ct.province_id

AND ct.id = st.city_id

ORDER BY province, city

);
```

# 火车相关

• 火车信息表-火车:实指一列火车实体。

• 火车运行时刻表: 指该列火车在某天运行的具体行为。

## 火车信息表 trains

- 表中的出发时间, 规定的是每次发车的固定时间, 因此不存在具体日期。
- 同时可能存在次日达的情况,到达日期和出发日期不在同一天,为记录方便,表中记录的是列车的运行时长,而非到达时间。

字段名称	字段类型	是否主键	是否外键	是否为空	字段含义	备注
id	int	是			火车编 码	
name	varchar(10)				火车名 称	eg: G1818
type	tinyint				火车类型	0-普通旅客 列车 1-普通动车 组列车 2-高速动车 组列车 3-其他
departure_station	int		<u>火车站</u> <u>编码表</u>		起始站编码	首程起始站 返程目的站
destination_station	int		<u>火车站</u> <u>编码表</u>		目的站编码	首程目的站 返程起始站
departure_time	time				出发时间	
last_time	time				运行时 长	

```
CREATE TABLE trains (
                       INT UNSIGNED AUTO_INCREMENT,
   `id`
   `name`
                        VARCHAR(10) NOT NULL,
                        TINYINT NOT NULL COMMENT '0-普通旅客列车, 1-普通动车组列车,
    `type`
2-高速动车组列车, 3-其他',
    `departure_station` INT UNSIGNED NOT NULL,
    `destination_station` INT UNSIGNED NOT NULL,
   `departure_time` TIME NOT NULL,
`last time` TIME NOT NULL.
    `last_time`
                         TIME NOT NULL,
   PRIMARY KEY ( `id`),
   FOREIGN KEY ( `departure_station` ) REFERENCES stations ( `id` ),
   FOREIGN KEY ( `destination_station` ) REFERENCES stations ( `id` )
) ENGINE = InnoDB CHARSET = utf8;
```

```
WHERE trains.departure_station = dep.id
AND trains.destination_station = des.id
);
```

## 火车运行表 runnings

字段名称	字段类型	是否主键	是否外键	是否为空	字段含义	备注
id	int	是			火车运 行编码	
train_id	int		<u>火车</u> <u>信息</u> 表		火车编 码	
departure_date	date				发车日 期	
actual_departure_time	datetime			是	实际发 车时间	可为空,为空时 表示未发车
actual_arrive_time	datetime			是	实际到 达时间	课为空,为空时 表示未到达
cancel	tinyint				是否取 消	01表示

```
CREATE VIEW view_runnings
AS (

SELECT runnings.id

AS id,

trains.id

AS train_id,

trains.name

AS name,

trains.type

AS type,

trains.departure_station

AS departure_station,
```

```
trains.destination_station
                  AS destination_station,
           Concat(runnings.departure_date, ' ', trains.departure_time)
                 AS departure_datetime,
           Addtime(Concat(runnings.departure_date, ' ', trains.departure_time),
trains.last_time) AS arrive_datetime,
           runnings.actual_departure_datetime
                  AS actual_departure_datetime,
           runnings.actual_arrive_datetime
                AS actual_arrive_datetime,
           runnings.cancel
                AS cancel
          view_trains trains,

       AND seats.seat_template_id = seat.id
```

```
AND details.seat_id = seats.id
AND details.passenger_id = passengers.id
AND details.order_id = orders.id
);
```

## 操作流程

### 添加用户和乘客

• users 用户信息表添加用户 (null, '用户名', 用户类型, '联系方式', '用户密码', 用户状态, 创建时间)

```
INSERT INTO users VALUES (null, 'test01', 0, '12345678911', 'admin', 0, NOW());
```

• passengers 乘客信息表添加乘客 (null, '姓名', '联系方式', 证件类型, '证件号码', 乘客类型)

```
INSERT INTO passengers VALUES (NULL, '苏桐渤', '12345678911', 0, '1234*********789', '1');
```

### 添加火车

• provinces 省份编码表添加对应省份 (null, '省份')

```
INSERT INTO provinces VALUES(NULL, '浙江省');
```

• cities 城市编码表添加对应城市 (null, 省份编码, '城市')

```
INSERT INTO cities VALUES(NULL, 1, '杭州市');
```

• stations 火车站编码表添加车站 (null, 城市编码, '车站')

```
INSERT INTO stations VALUES(null, 1, '杭州东站');
```

• trains 火车信息表添加火车 (null, '火车', 火车类型编码, 起始站编码, 目的站编码, '发车时间', '运行时长')

```
INSERT INTO trains VALUES (null, 'D3111', 1, 1, 6, '07:30:00', '08:22:00');
```

#### 添加固定车厢和座位

• price 火车价位表添加对应的座位类型及价格 (null, 火车编码, '座位类型', 价格)

```
INSERT INTO price VALUES (null, 5, '一等座', 687);
INSERT INTO price VALUES (null, 5, '二等座', 430);
INSERT INTO price VALUES (null, 5, '无座', 430);
```

- cabins seat\_template 添加固定的车厢和座位模板
- 存储过程 add\_cabin\_and\_seat(火车编码,车厢/座位类型,起始车厢,结束车厢,行数,列数)

```
CALL add_cabin_and_seat(5, 9, 1, 3, 8, 4);
CALL add_cabin_and_seat(5, 10, 4, 10, 10, 5);
```

### 添加运行班次和相应座位

• tunnings **火车运行表添加火车的某次运行** (null, 火车编码, '发车日期', null, null, 0)

```
INSERT runnings VALUES (NULL, 5, '2021-12-21', NULL, NULL, 0);
```

• seats 座位信息表添加一次运行的所有座位,选择对应的运行编码

```
INSERT INTO seats (
    SELECT null, runnings.id, seat.id
    FROM runnings, cabins, seat_template seat
    WHERE cabins.id = seat.cabin_id
        AND runnings.train_id = cabins.train_id
        AND runnings.id = 3
);
```

### 查询余票

• view\_runnings 查询当日运行的相关火车

```
SELECT *
FROM view_runnings
WHERE departure_datetime LIKE '%12-21%'
AND departure_station LIKE '%杭州%'
AND destination_station LIKE '%潮汕%';
```

• view\_seats 查询车次的余票情况

```
SELECT COUNT(*)

FROM view_seats

WHERE running_id = 3

AND seat_type = '一等座';
```

### 添加订单

• orders 订单信息表添加新的订单 (null, 用户编码, 时间, 0, 0)

```
INSERT INTO orders VALUES (null, 1, NOW(), 0, 0);
```

• details 订单向西添加相应车票 (null, 订单编码, 乘客编码, 座位编码, null, 0)

```
INSERT INTO details VALUES (null, 1, 1, 288, null, 0);
```
